Transform Your Mill's Efficiency

Backed by over eight decades at the forefront of polymer and composite-based technology, CPV has developed UltraCORE to meet the evolving needs of the paper and tissue industry.

UltraCORE is an advanced parent reel core, engineered to replace short-life fibre alternatives with a stronger, more durable, and environmentally superior solution.

Make The Switch

Upgrade your mill with UltraCORE, and unlock substantial savings on your operating costs. Proven in the field, mills switching to UltraCORE typically achieve a payback within just 12 months!

Cost Saving

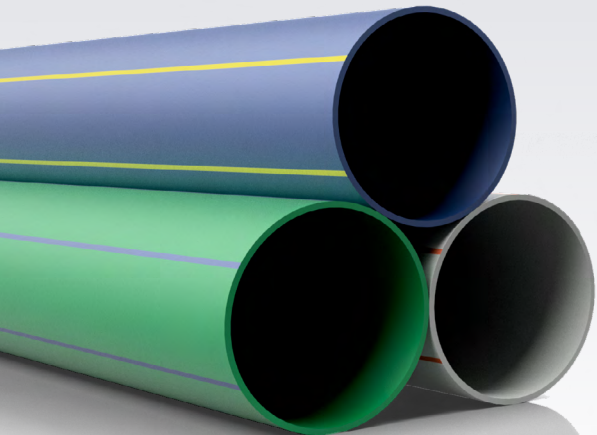

Producers can substantially reduce costs by swapping their traditional, short-lived cores with UltraCORE's incredibly durable and resilient polymer alternative. Typically achieving over 150+ rotations, UltraCORE can significantly reduce core procurement costs by up to 90%, as well as cutting transport, handling, and downtime related costs.

Sustainable

UltraCORE incorporates recycled materials into it's design, and are themselves fully recyclable at the end of their lifespan. This helps to reduce environmental impact and support circular economy principles.

Customisable

With sizes ranging from 20mm and 1/4" OD, right up to 600mm and 24", UltraCORE can be tailored to suit all papermaking equipment. They can also be produced in a wide range of base colours and tailored further with Identification Stripes. Additionally, they can be manufactured with RFID tags embedded for traceability.

	CPV UltraCORE	Cardboard (Fiber) Cores
Lifetime	150+ rotations	Typically max 10 rotations
Customisation	Striped / various colours	Single colours
Deformation Resistance	✓	✗
No Delamination	✓	✗
Weather Resistance	✓	✗
